

## GTS390H

Aerating/scarifying keeps domestic lawns aerated by removing moss, thatch and weeds which would otherwise suffocate the lawn and restrict the penetration of water and nutrients. For good results your lawn should be aerated at least every six weeks and preferably when conditions are dry for optimum effect

The GTS390H is fitted with 16 blades which aerate roots gently but effectively and a generous 39cm working width to help you get the job done quicker/ The working depth is fully adjustable up to 10mm by a central height adjuster. It is powered by a reliable HONDA GP160 163cc engine and the deck is made of steel for durability. It also features a folding handlebar for compact transport and storage, a 45 litre fabric debris collector (which can be removed to store), and sizeable wheels to make it easy to manoeuvre.

Two years limited domestic warranty.

### Specification

Engine	HONDA GP160 160cc
Working width	38cm/15"
Cutting system	Aerator/Scarifier
Cutting heights	Up to 10mm
Collector Capacity	Fabric 45 litres
Number of blades	16
Height adjuster	Central
Deck material	Steel
Weight	30kg
